

To find your slide gate total length figure out how wide you want the gate to be, divide it by 2 and add that measurement to the gate. This will give you your total gate length.

- Ex. 16' wide Gate Section divided by 2 = 8 + 16 = 24' Total Gate Length.
- The extra length on a slide gate is called the Cantilever Section which is required for the gate to rolls on in the closed position.
- Gate posts are mounted to the inside of the property and the gate rollers bolt onto the posts for the gate to roll on.
- The distance between the posts is 1' less than the Cantilever Section width centre to centre and must be installed in straight line true and square to each other.
